Adeniji Oluwaferanmi
Software Engineer

I am prolific at delivering resilient and sustainable software projects from design to implementation and rollout. I proactively ask for feedback from those I work with and identify ways to act upon it.

I contribute to a positive sense of community on the team (e.g. engage in team lunches, team offsites, and other group activities, help with new-hire onboarding). I'm able to understand the existing designs and technology choices within my area, and I make appropriate adjustments to existing designs when necessary.

Lagos, Nigeria.

EXPERIENCE

MoneyMie, Texas - *Software Engineer (React)*
October 2020 - PRESENT

- Develop and maintain the admin platform where different Moneymie departments(finance, admin, engineering, customer success) manage and monitor transactions done on moneymie.
- Build spec-perfect, performant products across both iOS & Android mobile platforms.
- Worked with teammates to implement new UI flows, ensuring product quality and usability. Developed landing pages for Moneymie(moneymie.com) which led to 20% more signups.

- Led a team of four developers on a web app referral program that increased the total number of users by over 120%.
- Built and developed a web application that monitors our third-party APIs (NIBSS, SILA-WALLET, CIRCLE) for any downtime and informs our users subsequently giving our users the best experience. This improved our user feedback positively.
- I work with my manager to direct my focus so my work advances my team's goals.
- I think a step or two ahead in my work, solve the right problems before they become bigger problems, and problem-solve with my manager when I'm stuck.

- Automated different processes, especially when it comes to automated CMS workflows with ghost cms and WordPress.

- Developed an Authentication Based Permissions System for the company management department. It features the ability to add new users to the admin panel based on their role(admin, finance, auditor, customer success) and also a permission-based authorization.

EDUCATION

SQI College of ICT - *Software Engineering*

Software Engineering Major

September 2019 - September 2020
